

## Lab 1 Report

**Purpose:** to understand and utilize how to apply the metric system to obtain accurate measurements and conversions within it.

**Procedures:** measure, record, and convert everyday items within metric system units.

**Results:** obtained accurate results within the metric system units.

**Discussion:** The metric system is used worldwide within the science community allowing a universal language between everyone from students, professors, scientists, and anyone in the science community.

**Conclusion:** Using and understanding how to communicate with our classmates when it comes to our results will make this class easier knowing how we can all obtain accurate and similar results.
